CAREER OBJECTIVE

Full Stack Engineer with hands-on experience building end-to-end web applications and integrating AI/ML models into production systems. Skilled in front-end and back-end development, RESTful APIs, and deploying machine learning solutions at scale. Passionate about building intelligent, scalable software that bridges robust engineering with applied AI.

TECHNICAL SKILLS

Frontend: React.js, Svelte, HTML5, CSS3, Tailwind CSS, Redux
Backend: Node.js, Express.js, Golang (Gin/Fiber), REST APIs, GraphQL
Databases: MongoDB, PostgreSQL, MySQL, Redis
AI/ML: Python, TensorFlow, PyTorch, Scikit-learn, Pandas, NumPy, OpenCV
DevOps & Tools: Docker, Pipelines, Git, GitHub Actions, AWS EC2
Languages: JavaScript, TypeScript, Python, Golang, C++
OS & Networking: WSL, Ubuntu, Windows Server, TCP/IP, DNS

WORK EXPERIENCE

Cross Atlantic Software

Intern

Patparganj, New Delhi

July 2025 – August 2025

- Built a full-stack, multi-agent RAG chatbot using FastAPI, LangChain/LangGraph, and Next.js, orchestrating a 5-stage pipeline (Intake → Clarification → Refiner → Retrieval → Generation) for multi-turn conversational Q/A.
- Implemented semantic search using Qdrant vector database and OpenAI embeddings, with a cron-scheduled maintainer syncing the vector store daily to keep retrieval results current.
- Deployed the backend on AWS EC2 with Gunicorn and Nginx (HTTPS, CORS-configured) and the frontend on Vercel, while using MongoDB and Neo4j-based knowledge graphs to enrich query tagging and structured retrieval.

PROJECTS

Expense Chatbot | Golang, Svelte, PostgreSQL, ConnectRPC, Ent ORM | Source Code

- Built a full-stack expense tracker with a Golang backend (ConnectRPC + Ent ORM) and Svelte frontend, backed by PostgreSQL with schema-versioned migrations.
- Designed a natural language chatbot that parses free-form messages (e.g. "spent 15 dollars on coffee yesterday") to auto-extract amount, category, and date, and logs the expense directly via regex-based NLP parsing.
- Implemented JWT-based authentication, budgets, recurring expenses, and category management, plus monthly spending insights comparing current vs. previous month totals and category-wise breakdowns.

Online Book Store | MongoDB, Express.js, React.js, Node.js | Source Code

- Developed a full-stack e-commerce web application using the MERN stack, enabling users to browse, search, and filter an online book catalog by genre, author, and title.
- Designed a scalable MongoDB schema to manage a growing book inventory and handle increasing user traffic without performance degradation.
- Built community-driven features including book reviews and discussion forums to increase user engagement and retention.

CareerAI Pro – Career Guidance System | React, Node.js/Django, Python, MongoDB/PostgreSQL | Source Code

- Built a full-stack AI-powered career guidance platform combining a hybrid recommendation engine (content-based + collaborative filtering) with a knowledge graph mapping skills to occupations and learning resources.
- Applied NLP techniques (skill extraction, profile-to-job matching) to parse resumes and job descriptions, and integrated classification/clustering models to generate personalized career pathways and skill-gap analysis.
- Developed key features including a career prediction tool, stream prediction (for Class 10 students), a resume builder, and an AI-driven cover letter generator, deployed as a responsive React web app.

EDUCATION

Shri Ram Murti Smarak College of Engineering & Technology

B.Tech in Computer Science & Engineering

Vidya Bhavan Public School

C.B.S.E. (12th) — 88.6%

Bareilly, UP

2022 – 2026
